

All information at a glance

Present your photovoltaic plant's performance data in a unique way with customized style. The Dashboard delivers a concise presentation of yields, CO₂ savings and performance. As an alternative, we also offer large external Solarfox[®] displays and the newly developed Solar-Log[™] APP for mobile access.

Solar-Log[™] Dashboard

The Dashboard provides customers a dynamic display of all of the important plant information, such as yield, CO₂ savings and performance. The display can be set up by selecting up to any four of the following elements: Current Production, Yield History including self-consumption, Earnings, Weather, Plant Information and Environmental Contribution. The Data Overview module makes it possible to even display the total yield data from several plants in one Dashboard. The Image and Text module allows you to add your own content to the Dashboard. There is the option to display one tile or up to four tiles in the full-screen mode or to display the files as a slide-show.
